SUMMARY

Aspiring **Software Development Engineer** seeking internship and fresher opportunities, with a strong foundation in designing **scalable, highly available, and fault-tolerant backend systems** from first principles. Architected backend systems capable of handling **100M+ daily requests** given production-grade cloud infrastructure, with deep focus on **system design (HLD/LLD), distributed systems, and backend engineering**. **SIH 2025 National Grand Finalist** (Top 0.5% of 300k+ teams) — contributed a geospatial AI verification solution to the **Ministry of Social Justice & Empowerment (MoSJE)**. Ranked among **India's Top 6 Campus Ambassadors** at Unstop, demonstrating leadership and community impact at scale.

EXPERIENCE

Unstop
Aug 2025 – May 2026

Campus Ambassador

- Ranked among **India's Top 6 Campus Ambassadors** at Unstop. conducted multiple outreach surveys and sessions guiding students on **placement preparation, hackathon participation, and competitive opportunities**.
- Contributed to the **Tata Imagination Challenge**. awarded a **Certificate of Appreciation** & Goodies from Tata group.

PROJECTS

GeoLoanLens (SIH - 2025 Grand Finals) | *React, TypeScript, Tailwind, Supabase, PostgreSQL, REST APIs*

- Directed an **AI-driven loan verification platform** with **real-time geospatial tracking**, boosting efficiency.
- Proposed **Role-Based Access Control**, projecting a **40% reduction in manual fieldwork** and **25% reduction in fraud**.
- Recognized as a **National Grand Finalist at SIH 2025**, ranking in the **top 0.5%** for technical innovation.

VibeBench | *Spring Boot 3, MongoDB, Redis, Docker, Java 21, REST APIs*

A premium, AI Coding Model evaluation platform that automates generation, sandbox execution, and metric scoring.

- Architected an automated orchestrator deploying isolated **Docker sandboxes (Ubuntu 22.04)** for secure, hostile-free execution and runtime bootstrapping of LLM-generated source code across multiple languages.
- Engineered a robust **5-step recursive self-healing loop** that intercepts runtime error logs and handles feedback targeting automated code correction with up to 5 automatic LLM refinement attempts.
- Implemented a multi-dimensional evaluation engine factoring **Functional Accuracy (35%)**, **Code Quality (20%)**, **Production Realism (15%)**, **Security (15%)**, and **Cost/Latency (15%)** metrics via OpenCode APIs.
- Optimized rendering performance by implementing low-latency **Redis caching** for the platform's top-10 leaderboard alongside throttled 1-second persistent updates to handle real-time console log streaming.

GridCam | *Java, CameraX, TensorFlow (LiteRT), MobileNetV2, Material 3*

*An **AI-powered** Android camera application that analyzes real-time scenes to suggest optimal photography **composition grids.***

- Engineered a **MobileNetV2** model via **TensorFlow/Keras** to accurately classify four core photography composition styles.
- Integrated **Google AI Edge (LiteRT)** via **ExecutorService** for **1.5s** interval ondevice inference, ensuring fluid performance.
- Employed **CameraX** to concurrently bind core camera use cases, harnessing the **MediaStore API** for direct-to-gallery saving.
- Crafted an immersive **Material 3** UI featuring adaptive SVG grid overlays that trigger at a **60% AI confidence threshold**.

Scalable URL Shortener API | *Spring Boot, Redis, MongoDB Atlas, Docker, Java*

- Designed a REST API with **Spring Boot** and **MongoDB Atlas**, scaling to handle **100M+ daily requests**.
- Integrated **Redis** caching to bypass database reads, ensuring sub-millisecond redirection and real-time click analytics.
- Architected server-side security via **Spring Interceptors** for IP rate-limiting, defending against automated bot attacks.
- Ensured API resilience using **Hibernate Validator** and **@RestControllerAdvice** for secure, global JSON exception handling.

SKILLS

Languages: Java, Python, C++, JavaScript, TypeScript, SQL.

Backend & Frameworks: Spring Boot 3, Spring Cloud, Spring AI, Spring Security, Hibernate (JPA), RESTful APIs, Microservices

Tools: Git, GitHub, Docker, Postman, JUnit, Maven

Databases: PostgreSQL, MySQL, MongoDB Atlas, Redis, Oracle, Supabase

Core Competencies: System Design, Distributed Systems, OOP, Data Structures & Algorithms, CI/CD, Agile/Scrum

EDUCATION

Aditya University — Aug 2024 – May 2028

B.Tech in Computer Science (AI & Machine Learning) • **CGPA: 8.08** — Surampalem, India

- Minor: **Cloud Infrastructure** – CISCO / Red Hat / Oracle / AWS / Microsoft (32 credits, 10 courses)

CERTIFICATIONS & ACHIEVEMENTS

SIH 2025 National Grand Finalist: Selected from 300,000+ teams for architecting a secure financial verification platform.

Cambridge English Empower B2: Certified professional-level communication and cross-functional collaboration.
